

Description

I designed my tool to look minimalistic and always keep a professional style.

The storyboard uses the Roboto Slab font that I addressed to be the most appropriate for my website. It uses the colour palette present in my mood board, which is made of shades of brown and blue.

The main page includes a presentation of the product to show people why and how to use the logging tool.

From that page it is possible to create an account or log in, just few data are required.

From the user profile page, it is possible to see all the projects the user is working on and it is possible to amend personal details. Users can search for another users' profile.

The most important page is the Project page where all the user's projects are listed. Clicking on a table allows the user to navigate to specific project's logs with all the times; to read a list of all the notes and files attached to the project. It is also possible to quickly create a new time entry. Everything is simple and uncomplicated since the layout is meant to be always clear (using light and consistent colours, tables and reducing the number of interactions required from the user to accomplish tasks) so the user knows where to go for any action. Everything is prompted without having to look for specific buttons or areas. Creating a new project is very straightforward, a project name is mandatory because it identifies the project, and it is also possible to share the project with other members so they can contribute to it at the same time.

Users can add tags to show what skills are involved.

Clicking to a specific single project line in the table opens a view of all the logged times and from there it is also possible to browse logs simply selecting a time entry. It shows all the notes, images, links and file attached. In the storyboard it is possible to see a predicted interaction from the user.

User is also able to edit the project details.

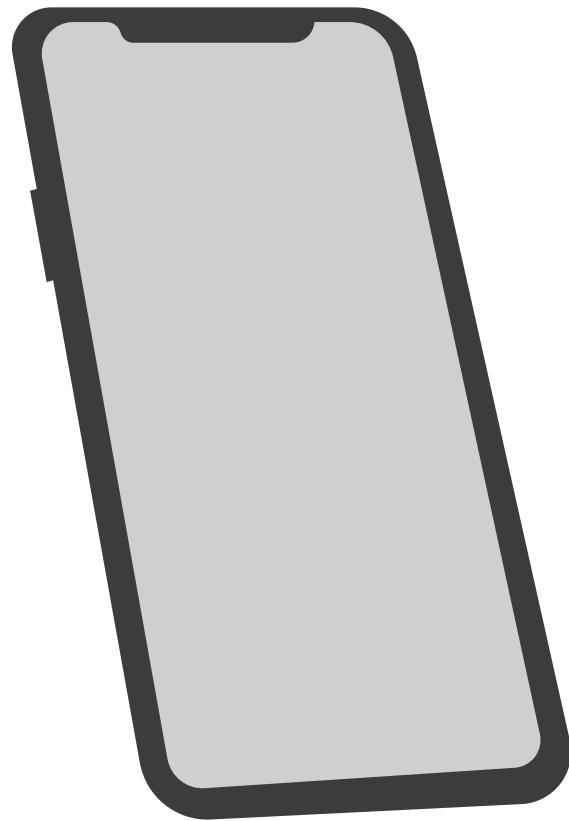

It is possible to change the type of view from a list of all the time slots with files shown only for the specific clicked time to another view with all the details for every project log.

Users can add new time logs specifying a title and the number of hours spent on a task.

Then, it is also possible to attach images, files, links or just add some text. It is also possible to add a line to summarise the work done.

Every user has a profile page where all the projects they worked on are listed.
In this page users can also change their log in and profile details.
When users search for other user, they can see their profile

New Project

Name	Data created	Members	Tags	Total Hours	Files	Quick Add
Logging tour for developers	02.11.2020	F. Galassi; M. Smith	Adobe xd; HTML; CSS; PHP; Javascript	249		
Ecommerce online	15.09.2020	J. Jones; H. Williams	Javascript; PHP; React; Vue.js	19

USB Tour App	18.10.2019	F. Galassi; M. Smith	Java, Android Studio	647		

In project page users can find all the projects they are working on.

Using the buttons it is possible to add new projects, or visit the details of the ones already created.

It is possible to click on users' name contributing at projects: it redirects to their profiles.

Users can also go directly to all the project files and notes added to specific logs or they can quickly add new time entries to any project.

Users can filter projects and order them by data or name.

Multiple users can log on the same projects.

It is possible to add tags.

When creating a new project, users are able to add other users to it.
Then the project appears on their project page as well.
It is possible to browse between all the users registered at the application.
Users can also add tags, for example to recognise programming languages.

Clicking on a specific project shows all the time entries, with specified all the hours every single user worked at the project.
Clicking on a specific time slot shows all the notes, files, images attached to that entry (bottom).
It is also possible to add a new time slot, edit the project details or browse all the files/notes appended.
Multiple users can log on each project.

Please click on the second row! (result on the net page)
